Many animals have gone extinct because of so many reasons. Men actions are well-known to be the major causes of animal extinction. Men hunt animals for their meat, skin and sometimes to sell their teeth or bones. Another thing man has been doing to cause animal extinction is the destruction of the animals' natural habitat. People have been cutting trees to create lands for farming and building. Moreover, the use of pesticides contributes to killing animals. When animals feed on the plants which pesticides were used on, they either get ill or die. Pollution plays a vital role in animal extinction as well. Although biologists have been unable to isolate a single cause for the recent rapid decline in numbers and extinctions of many species, it spears that much of it is due to pollution.

Q What are the reasons for animal extinction?

one of the major reasons for animal extinction is pollution. The use of pesticides is also known to be why many animals die or get ill. In addition, people hunt animals for different reasons which can cause them to be extinct. Another thing people do to kill animals irresponsibly is when they cut the trees and destroy the animals' homes.
